Summary

Final-year Digital Security engineering student at EURECOM seeking a **6-month international internship** from September 2026. Focused on SOC operations, malware analysis and reverse engineering, with practical experience applying machine learning to detection and triage problems in Python and C.

Projects

Meerkat | ML-Assisted SOC Alert Triage 07/2026 - Present

github.com/jiacwng/meerkat | technical report

Built a Python triage CLI over Wazuh, Suricata and AMiner, normalizing three alert schemas, severity scales and host identities into one queue enriched with MITRE ATT&CK techniques. Designed the queue to maximise distinct attack activity covered under a fixed daily budget. Grouped repeated alerts per host and rule into one decision each.

Scored cases with a Random Forest and a logistic re-ranker. Surfaced **58 of 60** attack steps in a ten-case budget against 33 for native detector severity, on companies held out of training.

Shipped ATT&CK Navigator export, analyst decision capture, CI on three Python versions, and a 17-page technical report.

Malfamily | Malware Classification via Static Analysis 05/2026 - 07/2026

Classified malware into 6 behavioural families across PE, ELF and Mach-O binaries, using assembly instruction mnemonics as the sole feature source.

Disassembled x86 binaries via Ghidra scripting into normalized mnemonic and semantic-category frequency histograms.

Trained a Random Forest on 472 samples: **77.9% accuracy** against a 25.3% baseline, 0.77 Macro-F1 across ransomware, RATs and infostealers.

SmudgeC | Native C Source-to-Source Obfuscator 06/2026 - Present

Wrote a C source-to-source obfuscator in pure C, with a hand-built lexer and symbol table and no parser generator or external dependency.

Renamed user-defined identifiers and encoded string and integer literals across configurable passes, emitting compilable C with behaviour preserved.

CTF Writeups | Security Labs & Exploit Chains 05/2026 - Present

github.com/jiacwng/ctf-writeups

Authored 25+ walkthroughs and exploit chains for picoCTF challenges and security labs, covering binary exploitation, web and forensics.

Open-Source Contributions

Mnemocrypt | Cryptographic Function Detector 11/2025 - 02/2026

Improved an open-source IDA Pro cryptographic-function detector that misread compression code as crypto. Rebalanced training data with goodwill from zlib, lzma, zstd and nine other libraries; extended to x86-64.

Added lane-aware SIMD instruction counting. Cut false positives on held-out goodwill from 48 to 9, precision 0.60 to **0.86**, recall 0.25 to 0.46.

Prototyped operand-level features, including AES S-box detection by byte entropy, and tested

their transfer to real malware.

Experience

Software Engineering Intern | Reva 2, Nice, France **07/2025 - 09/2025**

Contributed to a secure full-stack web application in React and Express.js.

Assisted in implementing defence-in-depth controls: Helmet security headers, strict CORS policies, API rate limiting and environment-based secrets.

Volunteer Teacher | Association Amours et Coeurs Unis en France **03/2026 - Present**

Volunteered over 100 hours teaching French to non-native speakers and assisting them with French administrative procedures.

Treasurer | School Student Association **2023 - 2024**

Managed the association's budget for one year, funding student events and reporting on spending.

Education

EURECOM, Mines-Télécom | Sophia Antipolis, France **Expected 03/2027**

French Engineering degree (Diplôme d'ingénieur) specialized in Digital Security

Core Modules: System and Network Security, Machine Learning and Intelligent Systems, Computer Architecture, Hardware Security, Digital Forensics, Secure Communications, Multiparty Computation and Blockchains, Distributed Systems and Cloud Computing.

Classe Préparatoire aux Grandes Écoles, Lycée Descartes | Tours, France 07/2023
MPI Track (Mathématiques, Physique et Informatique)

Two-year intensive programme in mathematics, physics and theoretical computer science, the selective national route into French engineering schools, concluding with competitive entrance examinations.

Certification

Handimanage Label | Companieros **10/2025 - 01/2026**

Certified in managing and promoting disability inclusion in the workplace.

Skills

Security: Wazuh, Suricata, MITRE ATT&CK, IDA Pro, Ghidra, gdb, nmap, Wireshark.

Machine Learning and Data: scikit-learn, pandas, NumPy.

Tools: Git, GitHub Actions, Open5GS, Microsoft Azure.

Programming Languages: C, Python, OCaml, Assembly (x86-64, RISC-V, ARM), Java, JavaScript, SQL, MATLAB.

Languages: Mandarin (Native), French (Native), English (TOEIC 930).
